

PEER REVIEW FOR FIRE PROTECTION SYSTEMS

In compliance with Section 104.8.2 of the International Fire Code, the Unified Fire Authority requires a technical opinion and report (peer review) for all plans involving:

- Installation or modification of automatic fire protection systems
- Fire alarm and detection systems, including related equipment
- Fire pumps, fuel tanks, jockey pumps, controllers, and related equipment
- Installation, modification, or removal of standpipe systems from service

Exceptions:

- Installation of fire hydrants and underground water lines
- Pre-engineered kitchen hood suppression systems
- Installation or relocation of fewer than 20 sprinkler heads
- Installation or relocation of fewer than 5 alarm/notification appliances

The following companies and individuals have been approved by the Unified Fire Authority as design professionals authorized to conduct third-party plan reviews. Approved reviewers may not review plans or drawings prepared by their own firm or its representatives. *Companies marked with "AFS" are approved to review water-based automatic fire suppression systems only.*

Protection Consultants Inc.

Greg Jones, P.E.
